BI Converter

Accelerate cross-platform BI migration with a worry-free experience

Enterprises are either choosing or exploring modern BI platforms for innovation and agility. Some are dealing with multiple tools often with overlapping functionality. But high switching costs and business risks prevent organizations from consolidating or modernizing their enterprise platforms once they have rationalized their investments. However, migration from one BI tool to another does not have to be effort intensive, fraught with data issues, and lengthy.

Migration requires an assessment of the current and the target system, rationalization, extraction of the metadata, conversion of reports, and validation. This process can be challenging due to reasons such as a gap in required technical skills and lack of built-in automation tools - thereby requiring manual effort, more time, and higher cost. Specialized tools significantly accelerate this process by automating manual activities and enabling you to focus on what matters for your business.
BI Converter

BI converter is an economical and resourceful solution that allows you to seamlessly switch to a BI tool of choice by automating the major components of the migration cycle from the source to the target system. This allows you to focus on transformation efforts rather than worrying about the foundational elements.
